Adapting Technology to Your Business Needs

SIM2K[®] MAVerick

Managed Anti-Virus Protection

SIM2K[®] MAVerick (Managed Anti-Virus) anti-virus service utilizes advanced technology to scan large volumes of information quickly with minimal impact on system performance. The solution detects and blocks viruses, worms, spyware, Trojans, bots and rootkits via a single, powerful anti-malware engine.

SIM2K MAVerick also protects against email viruses, with direct support for Microsoft Outlook, Outlook Express, Windows Mail and any email program that uses POP3 or SMTP. Additionally, the solution strips e-mails of phishing links – blocking access to phishing websites.

SIM2K MAVerick monitors and protects against malware threats, including zero-day threats, in real time. It leverages multiple detection methods, such as dynamic code translation, heuristics, behavioral analysis and traditional, signature-based technologies, to analyze malware.

Once installed, it automatically updates on a regular basis to keep you protected as new threats are discovered. The protection runs in the background of your PC so it will not interfere with your normal use of the computer nor will it slow down your processing. Any threats detected will be quarantined and will not reach your files.

SIM2K MAVerick is compatible with Windows 7 (32 and 64-bit), Windows 8/8.1, Windows 10, Server 2008 and Server 2012. The solution also supports Mac computers running Mac OS X versions 10.5 (Leopard), 10.6 (Snow Leopard) and 10.7 (Lion).

Call SIM2K for more information on MAVerick and all our SIM2K Support programs.
